

ABSTRACT

Methods and apparatus for managing devices and content in a network environment. In one implementation, a method of binding content to a hub network includes: receiving a request to bind a discrete version of content to a hub network including a server and a client as members of said hub network, wherein said discrete version includes discrete locked content data; disabling said discrete version; and creating a source version of said content stored on said server, wherein said source version includes source locked content data; creating a root license stored on said server, wherein said root license is bound to said hub network.
